### ***Detailed Action***

Applicant's arguments filed March 10, 2004 have been fully considered but they are not persuasive due to a new prior art that has been applied against the claim invention as below.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 8-10, 13, 18, 20 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Ashizaki et al. (US Pat. 5,128,586), hereinafter Ashizaki.

Ashizaki discloses an inline electron gun for a color cathode ray tube (Figs. 3-5), the gun comprising:

A cathode (K), arranged in a horizontal line, emitting an electron beam;  
a control electrode (2 or G1) having first hole regions (11), each one of the first hole regions including a first vertical indented portion (11) formed at an output side surface of the control electrode (2) and including a first hole portion (12) formed in the first indented portion (11), the electron beam passing through the control electrode via the first hole portion, wherein the first hole portion has an elongated shape (12);

a screen electrode (G2) being installed adjacent to the control electrode (G1), the screen electrode (G2) having second hole regions (56), wherein the second hole regions having circular shape (col. 3, lines 6-10); and

a plurality of focusing electrodes (6, 8) being sequentially installed from the screen electrode and respectively forming electron beam passing holes having a predetermined shape (Fig. 1), the focusing electrodes form a plurality of quadrupole lenses (Fig. 1).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ashizaki.

Ashizaki discloses substantially the claim invention as noted above in that the hole portion of the first hole region being an elongated shape having a vertical width greater or the same to a horizontal width as claim invention, and leave the option of selecting a number of different hole's shape up to one skill in the art for particular application in order to optimum the precision of the beam focusing. Such implementation is considered as a routine skill in the art.

***Allowable Subject Matter***

5. Claims 5-7, 11, 12, 14-17, 19 and 22 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to suggest each one of the second hole regions including a second indented portion formed at an output side surface of the screen electrode and a second hole portion formed in the second indented portion as required in claims 5, 11 and 22. The prior art also lacks to establish plurality of focusing electrodes installed in an order manner related to a control and screen electrodes in that a fourth/additional focus electrode and fifth/next focusing electrodes forming a first quadrupole lens and a second quadrupole lens respectively as required in claims 14 and 19.
